

# King's Q Series Alarm System

Our alarm system provides you and your loved ones protection and peace of mind all the time.

It is linked with the telephone connection device and/or cellular device to enable communication to go through in the event of an alarm situation occurring.

When there is an intrusion, a signal is transmitted from a device such as a magnetic contact or vibration sensor to the system's control panel. Upon receiving the signal, the system sends it to a designated party - either the owner or a central monitoring station.

- The system allows you to remotely call in to arm and disarm from wherever you are. Through configuration at a predetermined time, the system can initiate auto arming
- The system offers great convenience by permitting you to remotely call in to switch on/off the electrical appliances such as air-conditioning, water heater and lighting etc.
- Our panel offers a unique feature in the form of pre-recorded voice during call in/out reporting and status reporting
